Aluminium covered with Renolit

We supply and install different types of aluminum slats, covered in Renolit, this material perfectly replaces the common wooden slats for many outdoor benches.

- The Renolit Exofol protective film consists of 4 layers of PVC which together form a film with a total thickness of 200 my, including the embossing.
Its duration is guaranteed for 10 years, it resists to the most adverse climatic conditions, fire and vandalism.

WHY CHOOSE EXOFOL

- Higher quality raw materials, modern technical innovations, higher performance
- Patented material
- Absence of plasticizers with consequent greater stability of the copolymers, the film is more elastic and lasts longer
- The color pigmentation has been perfected
- The improved UV protection of the transparent surface layer protects the entire system
- The primer on the back of the film increases the adhesive force on the profile, while maintaining the same workability.

COLORS AND FINISHES

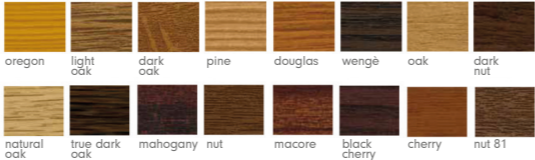

The Renolit Exofol protective film is available in a very wide range of colors and finishes.

Even for lighter shades, such as white, this coating is always the right choice, as light colors benefit from the protection of the acrylic transparent film, which is improved in its performance thanks to a very high and stable percentage of agents absorbing UV rays.

Corten steel urban furniture

Main feature is the excellent resistance to corrosion from atmospheric agents, given that the natural oxidation stops over time, forming a protective patina that does not change over time. The oxidized chromatic tone that originates on the surface appears warm and intense and offers many aesthetic solutions in relation to the unusual "elegance of rust" which underlines the feeling of experience given by the signs of aging, as evidenced by the wide use for buildings and monumental sculptures outdoors.

Non Solo Arredo is able to supply any type of corten steel furniture, as well as having products in the catalog it also carries out custom-made and customer-designed work.

WHY CHOOSE CORTEN STEEL

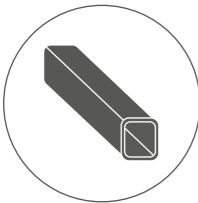

- It has a lower cost than normal steels because, with the same mechanical resistance, it is possible to achieve appreciable reductions in thickness and consequent reductions in weight
- It has excellent structural and atmospheric corrosion resistance which allows the corten to be used even in its original state. The metal does not deteriorate over time, but instead gets a lived-in look
- Minimal maintenance and cleaning
- It lends itself to different processes such as forging, bending, drawing, laser cutting, welding, thus making it extraordinarily versatile absolute non-deformability over time
- 100% recyclable because it is a natural material

Production and control

Our articles are the result of a complete study, from the design to production, and are obtained using the most sophisticated and innovative production systems that the market and the type of work can offer. Therefore, by combining Cad-Cam design with a robotic welding system, laser cutting and CNC bending machines, we are able to manage the most diversified processes, always bearing in mind that the ultimate goal must be a qualitatively good product, devoid of any its share of structural defects.

Finally, all the materials are subjected to a cycle of controls (from production to shipping) that Non Solo Arredo Srl has studied to guarantee a high quality level of its articles.

STEEL

Steel products normally see the use of plates, pipes or rods with a thickness ranging between 1.5 mm and 3 mm, which after cutting and semi-processing are hot galvanized and then painted with polyester epoxy powders with oven cooking at over 200°C. The treatments applied guarantee maximum resistance to corrosion and the creation of rust which lead to the deterioration of the product. The quality of the materials used limits the effects of vandalism or accidental knocks. Stainless steel is also used in many products. We also offer the possibility of applying a further anti-corrosion treatment, to resist saltiness and extreme temperatures, reaching class C5I of the DIN ISO 12944 standard.

WOOD

Most of the products that include wooden parts normally involve the use of Iroko, tropical, or Nordic pine wood slats. The staves, framed, rounded and smoothed, undergo the following finishing treatments depending on the type of essence: the Iroko staves are impregnated by immersion with an anti-fungal and anti-woodworm product and, upon request, they are finished with two coats of single-component varnish for exteriors with added UV absorbers. The Nordic pine staves undergo an impregnation treatment in a pressure autoclave with anti-fungal and anti-woodworm mineral salts. Upon request, they can be protected with paint for exteriors with added UV absorbers. Upon request, almost all of our products can also be made in larch wood, of a better quality.

CONCRETE

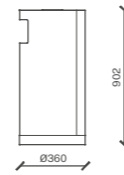

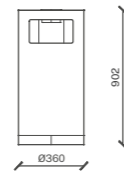

The concrete products are obtained by mixing aggregates of light-colored stones and white Portland 42 cement. The mixture thus obtained is subsequently vibrated to make it compact and give it high mechanical resistance. The artifacts on request are protected with a transparent, anti-mould and anti-degradation silicone resin.

OTHER MATERIALS

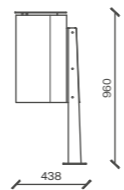

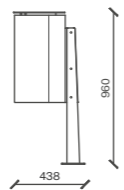

All the other materials used in the production of our articles, such as nodular cast iron or aluminium, are chosen to be a guarantee of durability and maximum quality, always in accordance with the design and aesthetics.

Litter bins | Fence enclosure

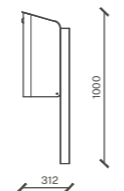

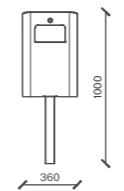

//Litter bin
TOKYO

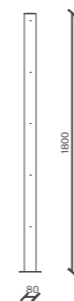

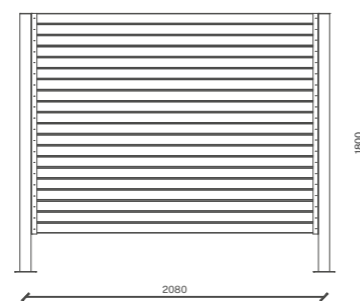

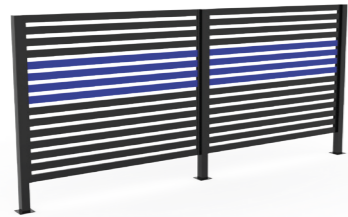

//Litter bin
ORBIBELLO

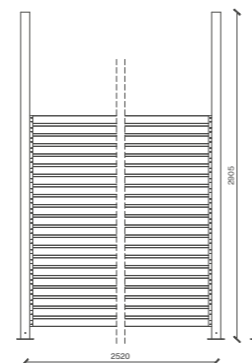

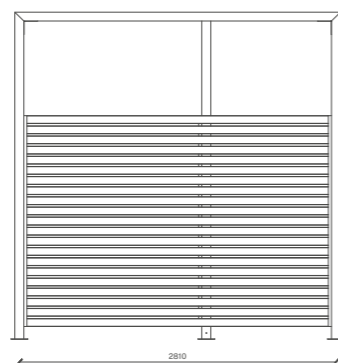

//Dog waste
bin
ZOE

//Fence enclosure
OVER

//Fence enclosure
TORINO

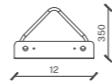

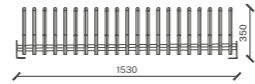

The litter bins are made of galvanized steel, powder coated, they can also be made of corten steel. The bin enclosure are made of galvanized steel structure, powder-coated, the slats are made of alluminium and renolit or coated steel.
- To be fixed with bolts to the ground / concrete / free standing

- **Examples of RAL colours**
On request, the product can be painted in different colors, for example

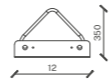

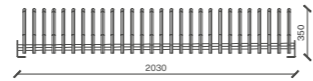

Bicycle racks Diamante

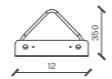

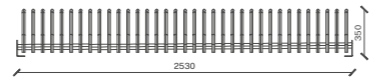

//Bicycle rack

9 places -
with concrete support

The Diamante's bicycle racks series is made of galvanized steel, powder coated.
The support are made of reinforced concrete.

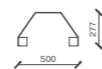

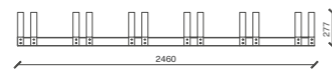

- To be fixed with bolts to the ground / free standing

- **Examples of RAL colours**
On request, the product can be painted in different colors, for example:

Bicycle racks Supreme

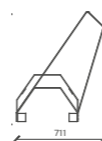

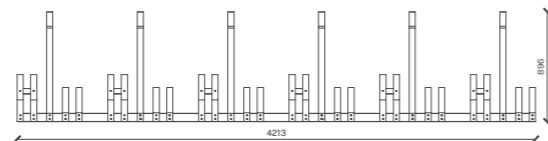

//Bicycle rack SUPREME 6 places

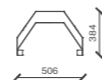

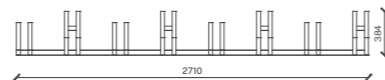

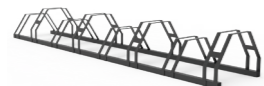

//Bicycle rack SUPREME UP 12 places

//Bicycle rack SUPREME PLUS 12 places

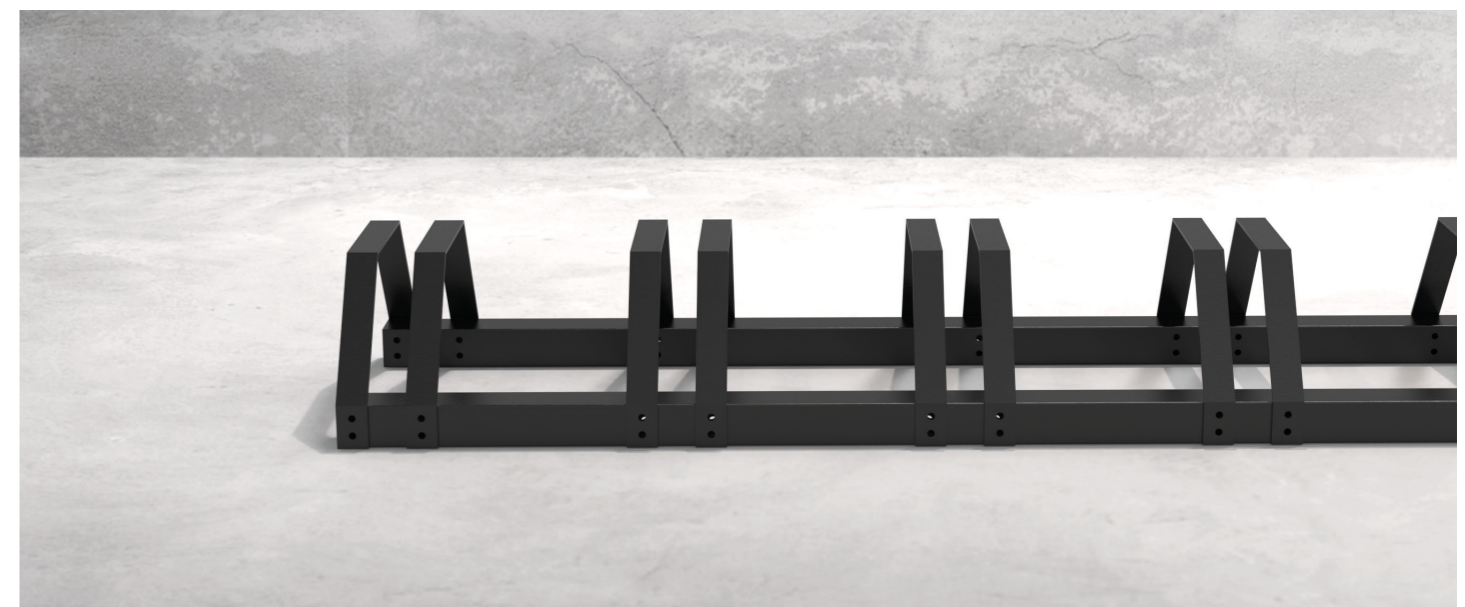

//Bicycle rack SUPREME SLIM 8 places

There are multiple versions available:

- **Supreme**
standard version with 7x7 mm tubulars - slim version with 4x4 mm tubulars
available with 3 - 6 - 9 seats
- **Supreme Up**
standard version with 7x7 mm tubulars - slim version with 4x4 mm tubulars
available with 8 - 12 seats
- **Supreme Plus**
standard version with 7x7 mm tubulars - slim version with 4x4 mm tubulars
available with 8 - 12 seats

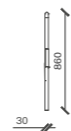

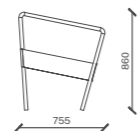

The Supreme rack series is made of galvanized steel, powder coated.
- To be fixed with bolts to the ground

- **Examples of RAL colours**
On request, the product can be painted in different colors, for example:

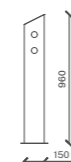

Single bike racks

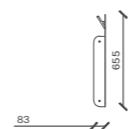

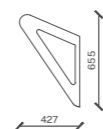

//Single bike rack
SLASH

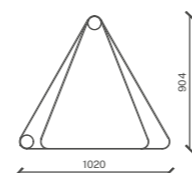

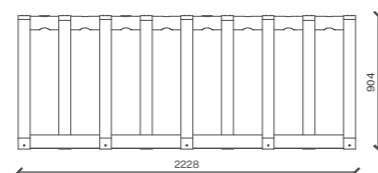

//Single bike rack
SILAOS

//Single bike rack
B-WALL

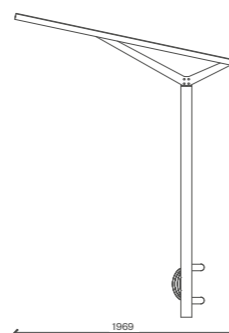

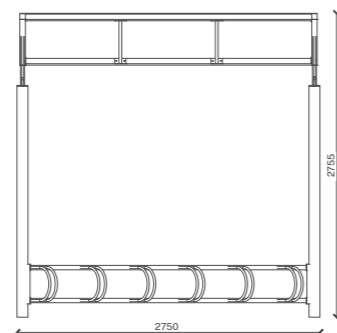

//Scooter rack
SLIDER

Bicycle shelter

//Bicycle shelter
AUGUSTA

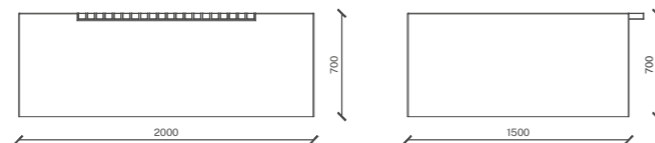

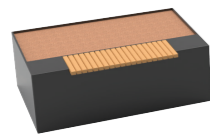

The singles bike racks and bicycle shelter are made of galvanized steel, powder coated.
- To be fixed with bolts to the ground / concrete / free standing

- **Examples of RAL colours**
On request, the product can be painted in different colors, for example:

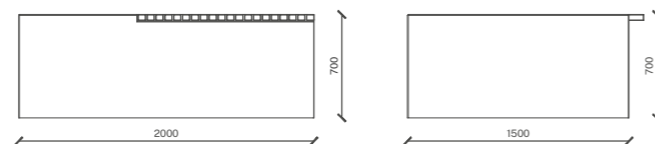

06 Planters

//Bench
LITHOS

//Bench
CIRCULAR

//Bench
VERA

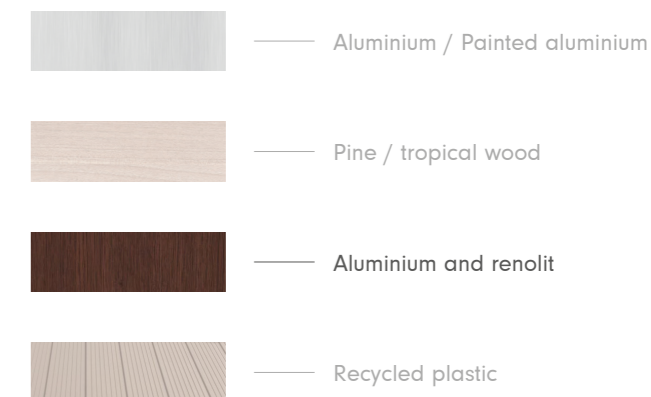

//Bench
KYPOS

• **Examples of available slats**

Upon request, the Lithos product can be customized with renolit slats

• **Examples of RAL colours**

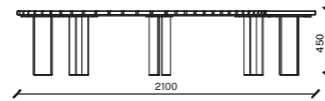

On request, the product can be painted in different colors, for example:

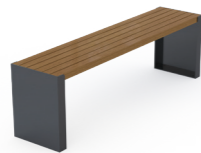

Benches with and without backrest.
Archit e Lithos are made of concrete, Lithos have wooden slats for the seat.
Circular, Vera, Kypos are made in galvanized steel, powder coated;
Kypos have wooden slats for the seat.

08 Benches
